1   Generating examples

Give an English sentence illustrating each of the following. It is not necessary that we have figured out a way to draw the structures exactly, this is about coming up with examples that show certain configurations. That is: **you are not trying to draw trees for these, just provide example sentences**.

1. An embedded finite declarative.

2. An embedded yes-no question.

3. An embedded *wh*-question.

4. A declarative sentence, in the past tense, with a modal and a progressive verb.

5. A declarative sentence, in nonpast tense, with a modal and a perfective verb.

6. An embedded infinitive with PRO.

7. An embedded infinitive with no PRO.

2   Simple trees

Your task: Draw trees for each of the following sentences. You do not need to draw any features. *Don't forget*, modals are no longer instances to T—T is generally silent and contains only a tense feature. Modals are a form of V now. Also: This has been assigned before we hypothesized any movement, so no movement needs to be shown. (That is for future homework assignments.)

(1)   We bought them.
(2)   We should buy them.
(3)   My brother will have been buying them.
(4)   They have asked us to be monitoring attendance.
(5)   They might want us to have bought the textbook.
(6)   We want them to promise to leave.
